

JOURNEY ON TH HIGH SEAS EXHIBITION

The law of the ocean is to survive and to reproduce in order to maintain your own species. If Man adds to the difficulties, for example by destroying certain habitats, then very few species will remain.

Now **draw** and **write** the actions you would like to undertake in order to preserve the species and their habitats

All sea creatures are adapted to their habitats. We must preserve their habitats so that we don't reduce their chances of survival.

Key Stage 3

Key Stage 4

Journey on the High Seas exhibition

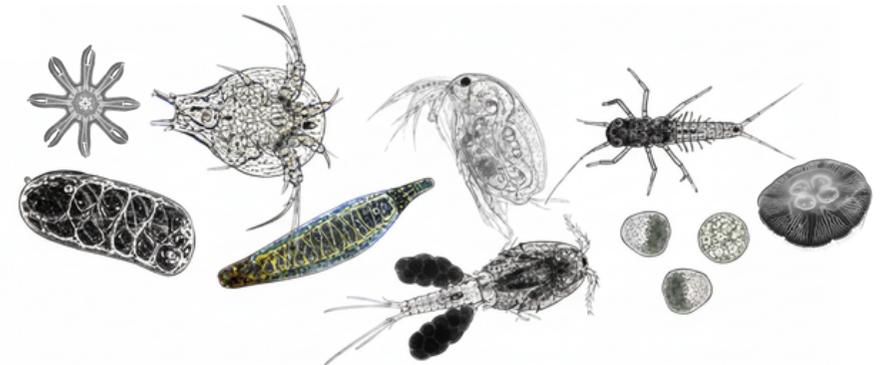

Marine animals special tricks

Every living creature has found a trick or a special way of behaving in order to survive in the ocean ; it is adapted to its habitat

During your visit to the exhibition, **look out** for all the living creatures shown in the next section.

When you find them, **write down** their name and the number of the area where they can be found as in the example below.

Then **fill in** the table of adaptations by writing the name of the animal in the correct square. Do this by finding the correct column for adaptation and the right line for its habitats. Take care ! The same creature can appear in several squares.

Area

1

I'm transparent just like water and float with the currents, what am I?

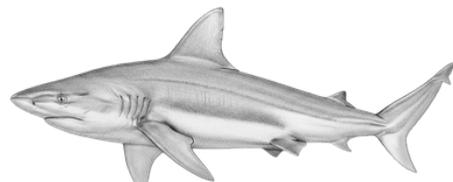

Adaptation of the marine animals

Whatever the habitat (the rocky sea bed, silty sea bed, sand sea bed, open water, coral reefs, trenches, warm or cold sea...), you will often find similar behaviours. Some creatures may have several different behaviours in order to eat without being eaten.

Area

I drift with the currents. I am transparent, with no brain and no heart, and I can sting my prey, what am I?

I am a large predator, with several rows of teeth that constantly renew themselves, what am I?

Area

Area

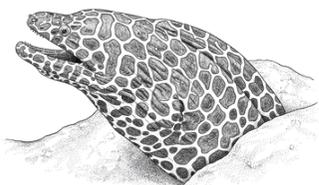

I swim in the dark of the reef at night, with glowing spots beneath my eyes, I flash my light to find food and signal others, by day, I hide from sight, what am I?

I live in the deep ocean, my legs can stretch wider than a car is long, my arms are enormous, I can molt as I grow, what am I?

Area

I live in a pipe or a crack in the rocks and i don't like to be disturbed, what am I?

Area

Adaptations Habitats	I go unnoticed	I live in a group	I live with a partner	I am armed	I defend my territory
Open water	Plankton				
Rocky seabed					
Sandy seabed					

I swim in shining schools, I travel in great numbers for protection, Often found in tins on your shelf, what am I?

Area

I lurk in the deep, dark ocean, With a glowing lure powered by bioluminescent bacteria, I wait patiently to attract my prey, what am I?

Area

I stay close to coral reefs, often hiding in crevices during the day, I am small, with bright red or orange colors, I come out at night to hunt and feed, what am I?

Area

I am bright blue and yellow, I carry a sharp blade near my fin for defense, you may have seen me in an animated ocean tale, what am I?

Area

I have bright blue and black stripes along my body, I clean larger fish by eating their parasites, even predators trust me, what am I?

Area

Marine animals special tricks

Every living creature has found a trick or a special way of behaving in order to survive in the ocean ; it is adapted to its habitat.

During your visit to the exhibition, **look out** for all the living creatures shown in the next section.

When you find them, **write down** their name and the number of the area where they can be found as in the example below.

Then **fill in** the table of adaptations by writing the name of the animal in the correct square. Do this by finding the correct column for adaptation and the right line for its habitats. Take care ! The same creature can appear in several squares.

Area

1

I'm transparent just like water and float with the currents, what am I?

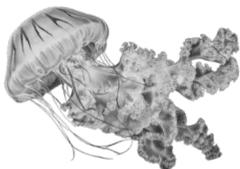

Plankton

Adaptation of the marine animals

Whatever the habitat (the rocky sea bed, silty sea bed, sand sea bed, open water, coral reefs, trenches, warm or cold sea...), you will often find similar behaviours. Some creatures may have several different behaviours in order to eat without being eaten.

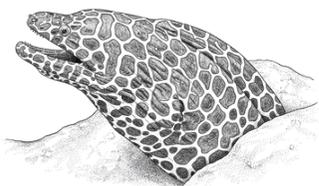

Area

1

I am transparent and my tentacles are poisonous to sting my prey, what am I?

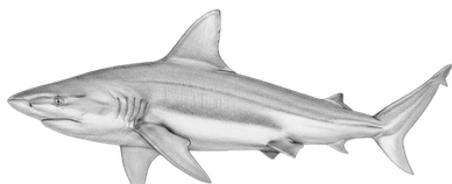

The jellyfish

I live in a pipe or a crack in the rocks and i don't like to be disturbed, what am I?

Area **The moray eel**

4

I am a large predator, with several rows of teeth that constantly renew themselves, what am I?

The grey shark

Area

3

I swim in the dark of the reef at night, with glowing spots beneath my eyes, I flash my light to find food and signal others, by day, I hide from sight, what am I?

The splitfin flashlightfish

Area

5

I live in the deep ocean, my legs can stretch wider than a car is long, my arms are enormous, I can molt as I grow, what am I?

The Japanese spider crab

Area

10

I swim in shining schools, I travel in great numbers for protection, Often found in tins on your shelf, what am I?

The sardine

Area

4

Adaptations Habitats	I go unnoticed	I live in a group	I live with a partner	I am armed	I defend my territory
Open water	Plankton The jellyfish	The sardine The splitfin flashlightfish		The grey shark	
Rocky seabed		The cardinal fish		The blue surgeon fish The moray eel	The moray eel
Sandy seabed	The Japanese spider crab		The common anglerfish		

I lurk in the deep, dark ocean, With a glowing lure powered by bioluminescent bacteria, I wait patiently to attract my prey, what am I?

Area

10

The common anglerfish

I stay close to coral reefs, often hiding in crevices during the day, I am small, with bright red or orange colors, I come out at night to hunt and feed, what am I?

Area

7

The cardinal fish

I am bright blue and yellow, I carry a sharp blade near my fin for defense, you may have seen me in an animated ocean tale, what am I?

The blue surgeon fish

Area

4

I have bright blue and black stripes along my body, I clean larger fish by eating their parasites, even predators trust me, what am I?

The bluestreak cleaner wrasse

Area

7
